Measurement in bench test

The Multi-Recorder TMR-300 system has many channels, which allows a single unit to measure multiple measurements simultaneously, so we can save space by using this. We can operate this system on PC through USB or LAN. These features make this system ideal for bench testing.

MEMS-based Acceleration Transducer

[Multi-Recorder TMR-300]

This system is vibration-resistant and small size enough to be installed in-vehicle.

A wide variety of sensor input units such as strain, temperature, and voltage are available, and various measurement units can be combined according to the purpose.
