

# In-Plane Shear Testing Device

This system is frequently used by testing and research institutes for **specifying an index as to how well a wooden bearing wall can withstand seismic and horizontal forces (wall ratio)**. Analog output of measuring instrument is applicable as the control signal for the testing machines.

## Point

- ✓ The extended channel function of measuring instrument provides with the arithmetic processing and the voltage output of the results.
- ✓ Applicable to hydraulic jack control
- ✓ The display screen is capable of DVI output providing the same screen display on a distant external monitor.

[Examples of products]

### Load Cell

TCLP-B (10KN~2MN)  
 TCLM-NA (10KN~20kN)  
 TCLY-NA (300KN~10MN)

### Displacement Transducer

CDP(5mm~100mm)  
 SDP-E (50mm~300mm)  
 DP-G (500mm~2000mm)

### Strain Gauges

FLAB series (for steel)  
 PL series (for concrete)
