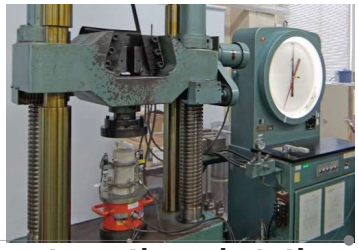
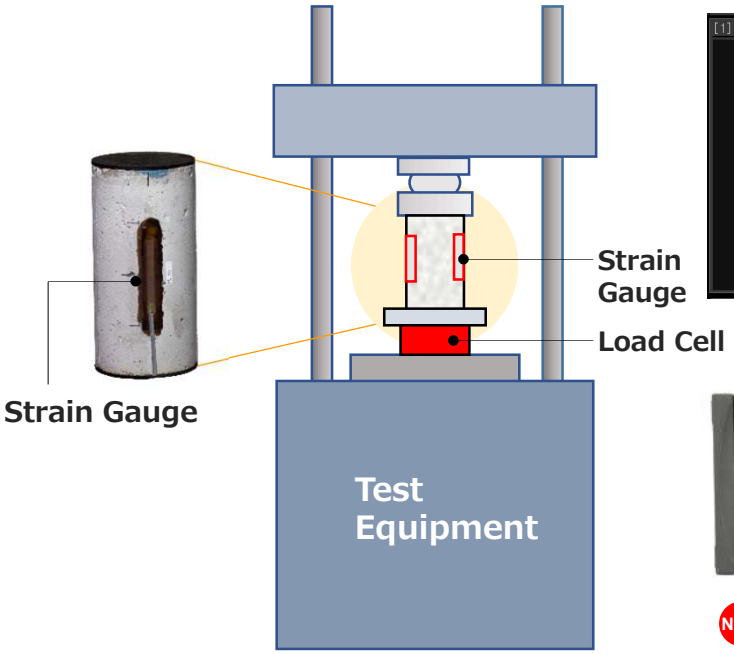
Concrete Compressive Strength Testing System



A measurement system **for measuring the concrete compressive strength and static elasticity modulus** and is **used for strain measurement on various concrete test pieces**, such as normal concrete and high-strength concrete.
Real-time display of measured and averaged values of two front/back side strain gauges.
Compatible with voltage signal input from a testing machine (display of max/min values).



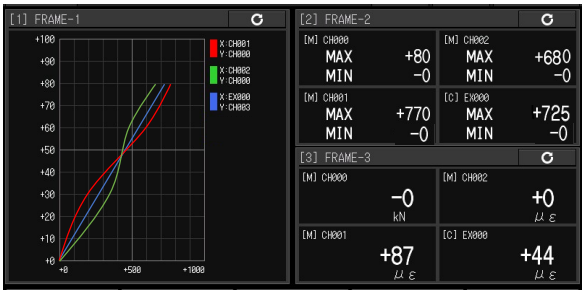


*Image is for illustration purposes.

load-strain curve

NEW **Data Logger**
T-ZACCS 9　TS-960

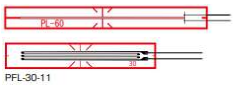
Point

- **Display Type is the Numerical Monitor / Max, Min Display**
- **Graph displays (Y-T, X-Y, bar graph) selected according to your application**
- **High-speed measuring mode with 0.1 second sampling intervals**
- **Capable of handling including quasi-dynamic phenomena**

【Examples of products】

Load Cell
CLC-NA（50KN～5MN）
CLL-NA（500KN、1MN）
CLH-NA（1MN～2MN）

Strain Gauges
PL series（for concrete）
PFL series（for concrete）



For compressive test
Applicable Specimens　Φ100×200　CM-10
Applicable Specimens　Φ125×250　CM-12
Applicable Specimens　Φ150×300　CM-15

For compressive test（High-strength concrete）
Applicable Specimens　Φ100×200　CM-10
